

AMJAD KHALIL AHMED ABDULLAH ALSUFYANI

Full Stack Developer | Flutter Mobile Developer | UI/UX-Oriented Software Engineer

Taiz, Yemen | (+967) 734 864 275 | amjadkhalilalsufyani@gmail.com | github.com/amjadkhalil711

PROFESSIONAL SUMMARY

Full stack and Flutter developer with 1+ year of hands-on experience building real-world web platforms, mobile-ready products, dashboards, REST APIs, and database-driven systems. Experienced with Laravel, FastAPI, Nuxt 3, React, Vue, Flutter, MySQL, PostgreSQL, Redis, Docker, and AI integration using Gemini and agent-based workflows. Strong focus on UI/UX, clean user flows, scalable backend design, and practical systems that solve community and business problems. Delivered government-oriented and startup-style solutions, including an AI hospital ticketing system that achieved 2nd place in Tamheed Competition by Hayel Saeed Anam Group.

CORE EXPERTISE

- **Full Stack Web Development:** Design and development of complete web applications, from responsive front-end interfaces to backend services, database models, admin dashboards, and API integrations.
- **Flutter & Mobile Product Thinking:** Ability to build mobile applications and mobile-ready experiences using Flutter and Dart, with attention to usability, performance, and future Android/iOS delivery.
- **UI/UX & Product Design:** Strong interest in modern UI design, responsive layouts, user experience, wireframing, and clean visual structure that makes systems easier to use.
- **API-Driven Systems:** Building REST APIs, documenting endpoints with Swagger/Postman workflows, and connecting front-end applications with backend services in clear, maintainable patterns.
- **Databases & Data Modeling:** Designing relational database structures using MySQL, PostgreSQL, SQLite, and Redis for caching, speed, and scalable application behavior.
- **AI-Enabled Applications:** Integrating Gemini AI and agent-based logic into practical platforms such as smart ticketing, recommendations, and intelligent user assistance.
- **Distributed & Microservice-Oriented Systems:** Practical exposure to distributed system concepts, microservices, service separation, reliability, and real-world operations through the Ghaith water management system.
- **DevOps & Delivery Basics:** Using Git, GitHub, Docker, and structured development workflows to organize, run, test, and prepare projects for deployment.

TECHNICAL SKILLS

- **Frontend:** Nuxt 3, React.js, Vue.js, HTML5, CSS3, JavaScript, Tailwind CSS, Bootstrap
- **Backend:** Laravel 11, PHP, FastAPI, Python, REST APIs, Swagger, Node Agent
- **Mobile:** Flutter, Dart, Firebase
- **Databases & Cache:** MySQL, PostgreSQL, SQLite, Redis
- **AI & Integrations:** Gemini AI, Google Maps, API integrations, agent-based workflows
- **Architecture:** Microservices, distributed systems, admin dashboards, API-driven platforms
- **Tools:** Git, GitHub, Docker, Postman, VS Code
- **Languages:** Arabic (Native), English (Professional Working Proficiency)

PROFESSIONAL EXPERIENCE

Independent Full Stack Developer - Web, Flutter & AI-Enabled Systems

2024 - Present

- Built complete web platforms and software systems independently, covering UI/UX, frontend, backend, APIs, database design, and admin dashboards.
- Developed scalable Laravel and FastAPI backends with REST APIs, structured database models, and integration-ready services.
- Designed responsive interfaces using Nuxt 3, React, Vue, Tailwind CSS, HTML, CSS, and JavaScript with focus on clarity and usability.
- Integrated AI capabilities such as Gemini and agent-based logic into practical product flows including smart ticketing and recommendations.
- Used Docker, Git, GitHub, Postman, Swagger, MySQL, PostgreSQL, Redis, and Firebase to support development, testing, and delivery.

SELECTED PROJECTS

Masar - AI Smart Hospital Ticketing System

Nov 2025 - Dec 2025

Tamheed Competition project - Hayel Saeed Anam Group | Achieved 2nd place

- Developed a smart web application for hospital ticket reservation and queue organization using AI-supported workflows.
- Built the backend with Laravel 11 and integrated Gemini AI and Node Agent logic to support intelligent ticketing behavior.
- Designed a modern responsive frontend using Nuxt 3 and Tailwind CSS with a clean user experience for hospital users.
- Used MySQL, Redis, and Docker to support data storage, caching, environment consistency, and production-oriented delivery.
- Contributed to the full product cycle from idea and architecture to implementation and competition presentation.

Technologies: Nuxt 3, Tailwind CSS, Laravel 11, Gemini AI, Node Agent, MySQL, Redis, Docker

Ghaith - Distributed Water Management System

2025

Personal impact project for water crisis management in Taiz, Yemen

- Designed and developed a distributed web system connecting citizens with water delivery drivers to organize water requests.
- Built order management flows, admin control features, and API-driven communication between system components.
- Implemented backend services using FastAPI and Python with REST APIs, Swagger documentation, and microservice-oriented structure.
- Focused on reliability, security, flexibility, and real-time operational needs for a critical community service.
- Created the project independently, covering system analysis, UI, backend, APIs, and database-related logic.

Technologies: FastAPI, Python, REST APIs, Swagger, Microservices, HTML, CSS, JavaScript

Yemen Tourism Platform

Ongoing

Platform for tourism, natural landmarks, historical locations, coastal areas, and islands across Yemen

- Developing a national tourism platform that displays Yemeni landmarks by city and helps users navigate to destinations through Google Maps.
- Built admin dashboard, APIs, destination listing flows, map-based access, AI recommendations, and structured content management.
- Integrated Gemini AI, Node Agent logic, PostgreSQL, Redis, and Google Maps to support smart discovery and location-based navigation.
- Designed the platform as a scalable product that can serve citizens, local tourists, foreign visitors, and tourism content managers.
- Owns the full project implementation, including product idea, UI/UX, frontend, backend, database, APIs, and technical direction.

Technologies: Nuxt 3, Tailwind CSS, Laravel 11, PostgreSQL, Redis, Gemini AI, Node Agent, Google Maps

SELECTED PRODUCTS & FOCUS AREAS

- Masar: AI-powered hospital ticketing and reservation platform focused on reducing crowding and improving patient flow.
- Ghaith: Distributed water request and delivery management system designed for water crisis response in Taiz.
- Yemen Tourism: AI and map-enabled tourism discovery platform for natural, historical, coastal, and island destinations across Yemen.
- CalorieTrackApp: GitHub-published application project demonstrating interest in mobile apps, tracking systems, and product-based development.

EDUCATION

Bachelor of Information Technology (IT)

University of Science and Technology, Yemen - 2022 - 2026

GPA: 93%

PROFESSIONAL FOCUS

Primary focus on building modern, scalable, and user-friendly software products using full stack web technologies, Flutter, AI integrations, clean API design, and strong UI/UX. Interested in long-term product reliability, maintainable architecture, and digital platforms that solve real problems in Yemen and beyond.

ADDITIONAL INFORMATION

- Work style: Self-driven developer able to own projects end-to-end from idea to implementation.
- Strengths: UI/UX, problem solving, API design, database modeling, product thinking, and fast learning.
- Availability: Open to full stack, Flutter, backend, and product development opportunities.
- References: Available upon request.
